

Association of Apartment Owners

A. Standard Protocol for Bedbug Chemical Treatments

1. If you have been advised or believe your unit has bedbug infestation, contact the Association office immediately at (808)661-6003. The AOA will contact Ecolab Pest Control on the owner's behalf to request a Room Inspection. The suspected room must be quarantined. Do not disrupt or remove any items from the unit or disrupt the contents of the unit until Ecolab performs its inspection. The Association office will assist the owner/managing agent in coordinating unit access for Ecolab.
2. If an infestation is confirmed, the room must be completely vacated for a period of time as a part of the comprehensive treatment by Ecolab Pest Control. A proper treatment includes two treatments, usually within 17 days of one another, and a re-inspection of the unit prior to release from Ecolab to insure the infestation has been completely eliminated.
